Title

Setting Up Augur

Description

The current setup documentation for Augur is somewhat hard to understand for new users and developers. The goal of this project is to consolidate and solidify the steps needed to install Augur, and potentially add some useful commands that can be used once Augur is installed.

Triggers

User wants to install Augur

Actors

Augur user

Preconditions

User has access to the Augur documentation

User has root access to the deployment server

Deployment server has enough storage and memory

Main Success Scenario (Goals)

The user is able to successfully and easily deploy an instance of Augur.

Alternate Success Scenarios

The user is able to successfully deploy an instance of Augur but with great difficulty.

Failed End Condition

The user is unable to understand the documentation and as a result, unable to deploy an instance of Augur.

Extensions

Test Augur and read the logs generated

Steps of Execution (Requirements)

Follow "Quickstart" guide in Augur documentation

A use case diagram

Dependent Use Cases

None
